

Yester Und Li Die Geschichte Einer Sehnsucht

Filesize: 9.43 MB

Reviews

*A new eBook with a brand new point of view. It really is written in basic words and not confusing. I discovered this publication from my i and dad recommended this book to find out.

YESTER UND LI DIE GESCHICHTE EINER SEHNSUCHT

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 38 pages. Original publisher: Reston, Va. : U. S. Geological Survey, 2007. OCLC Number: (OCoLC)190858827 Subject: Watershed restoration -- Oregon -- Upper Klamath Lake. Excerpt: . . . Perennial-grass seeding of ditches was estimated at 60 ha. Many farmers in the Yakima River Basin are converting to sprinkler or drip irrigation systems that are considerably more costly than either flood or furrow irrigation methods. However, grass-lined ditches may be an effective sediment reduction (total P source) method in the Klamath Basin. The estimated effectiveness of grass-lined ditches alone was up to 45 (U. S. D. A. Soil Conservation Service, 1992). Animal Manure as a Source of Phosphorus in the Watershed Solid waste is usually a mixture of dung, urine, and undigested vegetable matter. Cattle deposit wastes throughout the pasture in a variable fashion, but a greater density of wastes may accumulate near watering and feeding locations, or in loafing areas such as the riparian zones near streams where vegetation is plentiful and shade is available. Inorganic and organic P is present in significant quantities in animal manure (Chadwick and Chen, 2002). Some organic P compounds are relatively stable and mobile in soils while others may be quickly sequestered in clay minerals within the soil and accumulate in soil over time. The potential for surface water contamination from animal manure is seasonal and varies with irrigation practices, stocking densities, and meteorology (storm events). Livestock that receive supplemental feed in the form of grain may produce manure high in organic matter. If large quantities of organic matter enter watercourses adjacent to pastures through irrigation or storm event runoff, then they can create a large oxygen demand that can adversely impact aquatic life...
